

Providing Liquidity on uTrade V2

By providing Liquidity you will earn a share of the platforms trading fees in the form of UP token, which can be redeemed at any time. UP is the ideal liquidity farming token since every trade **increases the redeem value** of UP - it is called UP for a reason! UP tokens can also migrate to UNFI for access to enhanced liquidity rewards and governance staking rewards! Learn more about UP [here](#)

BEFORE adding Liquidity to any automated market maker (AMM) you should educate yourself on impermanent loss and the risks involved in becoming a liquidity provider [here](#)

1. Head over to <https://binance.unifiprotocol.com/liquidity> you should see the screen below.

Liquidity Pools

Liquidity providers earn a share of the fees generated by the uPair where the liquidity is provided. Fees are shared in the form of UP tokens. UP tokens earn a share of the trading fees generated by every trade and from the entire Unifi protocol.

For more information [check the docs](#).

Supplying Single Side Liquidity will use the provided token to buy the other token in this pair. This buy may incur significant slippage if there is not enough liquidity in this pool, resulting in a significant difference in price executed and the quoted price. You may set the maximum amount of slippage you will tolerate (current 0.8%) by clicking the slider icon at the top right. Be careful to manage this risk accordingly.

- Choose how you want to add liquidity and input the amount of tokens you want to add to the pool*

*With uTrade V2 Liquidity providers can choose between adding to both sides or one side of the pair. If adding to only one side of the pair, the smart contract will automatically sell half in order to purchase the other side of the pair and balance the pool of liquidity.

6. Set your slippage tolerance

- Supplying Single Side Liquidity will use the provided token to buy the other token in this pair. This buy may incur significant slippage if there is not enough liquidity in this pool, resulting in a significant difference in price executed and the quoted price. You may set the maximum amount of slippage you will tolerate (current 0.8%) by clicking the slider icon at the top right. Be careful to manage this risk accordingly.
- You can also set a deadline so transactions revert if they are stuck pending for a long time.

7. Check all values again and make sure you are happy with the amount you are adding to the pool and your slippage tolerance.
8. click submit transaction and wait for the transaction to execute
9. Once your transaction has been verified you will be taken back to the liquidity pool screen and you should now see your liquidity in the pool. If you can't see it but saw that the transaction was completed in the top right of the screen, try refreshing your page.
